ABOUT ME

I am a young, motivated and dependable student in my bachelor's of computer technologies. I would like to pursue my career in software development, thanks to my passion for programming and the desire to fully understand how the IT world around us works. I am therefore looking for an opportunity in a company in this sector that is ready to put its trust in a highly motivated student.

WORK EXPERIENCE

08/02/2021 – 14/05/2021 – Braine l'alleud, Belgium

Internship as an ICT Integrator

Assyst Europe

My first experience as an IT technician where I was asked to integrate different technologies with the purpose of synchronizing quantities of ressources consumed by clients into an ERP system, so that they could be billed automatically.

Working with these people comforted me in the idea of working inside of the IT world as well ignite the fire within me to learn as many things as possible.

01/10/2016 – 30/10/2020 – Nivelles, Belgium

Student crew

McDonald's

I have worked as a student at McDonald's for 4 years, at first in the kitchen and always under pressure to make the production as fast as possible, I had to quickly learn the different skills of the job, how the management worked but most importantly teamwork and communication. As a motivated student, I personally decided to start learning how to serve people at the table or at the drive and discovered my love for a job well done and a happy client.

Working at first at Waterloo, after 2 years I became a key part of the team and was asked to help open and train the new crew at McDonald's in Nivelles.
